

Energy crisis

I commend C&EN for the recent coverage of fuel-cell technology ([C&EN, Jan. 20, page 32](#)). I believe that the majority of Americans do not fully comprehend the depth of the energy crisis looming in our futures. Fuel-cell technology is moving along at an exciting pace. However, most of the coverage of this discipline is a side note to larger industry news. C&EN deserves credit for addressing the progress of this technology. This exemplifies ACS's push to address unsustainable practices and move the industry and its members toward a higher environmental consciousness.
